

Linewize Content Aware Module (CAM) - Image blurring

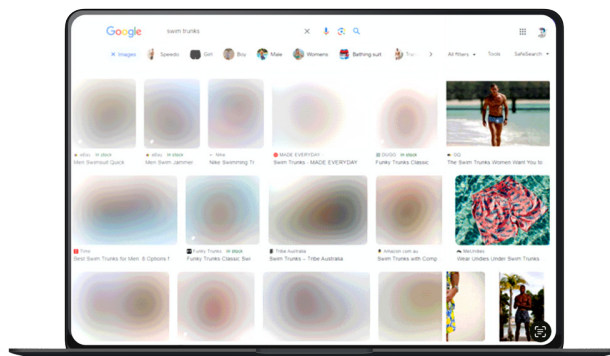

Prevent students from viewing harmful
or inappropriate images in real time
- on any website or search.

About the Linewize Filter Content-aware Module

Linewize Filter now comes with an optional
Content-aware Module (CAM).

The Content-aware module reinforces your filter
with real-time features that support a safer online
experience for all.

Image blurring is the first release within the
Content-aware Module. Image blurring assesses
the imagery on each individual page — rather than
filtering by URL — to allow some pages through
while blocking or restricting others.

Risk assessing pages not sites gives students access
to a greater volume of safer content for a better
learning experience.

What's more CAM works in real-time, meaning
there is no time lag between harmful content going
live and our Filter's ability to block it. Students are
protected in real-time, all the time.

Content Aware Module features & benefits

- ✓ Blurs images across the most commonly searched categories, including pornography and intimate apparel, such as swimwear and underwear.
- ✓ Checks every image on new, uncategorised, or exchange proxy websites in real-time, leaving no gaps in which children can be exposed.
- ✓ Allows access to school-approved exclusion lists to support curriculum needs and keep students on a healthy academic track.
- ✓ Provides customisable control of blur sensitivity levels to prevent over-blurring and ensure a safe, balanced learning environment.

Get in touch

If you would like to find out more about the Linewize Filter Content-aware Module and Image blurring, arrange a demo or ask any questions, please get in touch with our team of digital safety experts.

We'd be delighted to help.
